

## CASEY SHERRED LEED AP

SENIOR CONSULTANT

We're part of the technology revolution in our industry. Not only are there innovations for our clients, but the technology is fueling innovation in the design process itself.

I'm engaged by opportunities for development and change—especially when technology is making new things possible. My role on our team is not only to design systems to support experience, but also to make sure that our internal process allows us to move rapidly and responsively.
