

# KRISI HINOVA

CONSULTANT

Continuous improvement is a high value for me. I enjoy the experiences that make me better at what I do.

Challenges are the best opportunities for learning, and I am energized by solving problems. Noise and vibration issues are rarely straightforward. The investigative work and computer modeling required to get the answers to an issue never fail to engage me. I'm innately curious, and truly enjoy diving deep into issues to get to the solution.
