

LUKE KROGNESS CTS

CONSULTANT

My passion is providing the best user experiences. It is my meter stick of a design's success.

I understand the inherent challenge in meeting the needs of a wide variety of user groups and performance styles, and serve as an ambassador for the solutions emerging technologies can offer. In addition to AV design, my experience includes front of house mixing, venue technology management and audio, video and lighting for live events. I strive to provide consistent results that produce compelling experiences for those who interact with the systems I design.
