

FAN SHAPED AUDITORIUM WITH TERRACED SEATING

GRACE COVENANT

Acoustics and technology for multi-ethnic, multi-site, multi-generational church with vibrant contemporary worship.

Grace Covenant Church added 50,000sf of new construction to their existing campus, including a new worship center. Because the pastor had been classically trained as a musician, he valued the acoustics in the space to support worship and speech intelligibility from the platform. LED video walls and lighting were designed to give the creative team a canvas to create the environment. Infrastructure was designed for video streaming to multiple campuses.

PROJECT SCOPE

- Acoustics
- Lighting
- Audio
- Video
