Fast-tracked swing space for legislative and executive officials

The 10th and O Street office building was constructed to fulfill critical office space infrastructure needs for the State of California. The 472,000sf project has 10 floors designed around an open floor concept “heart” with naturally lit waiting areas, clustered conference spaces, and a shared central area with views of the State Capitol. Idibri was contracted by HGA for this progressive design build project to provide acoustics and AV design.

PROJECT TYPE

New Construction

COST

\$423 million
