Upgrades to audio, live streaming and video capture of City Council meetings.

The City of Poway streams council meetings live on meeting nights and provide the recordings the day after the meeting. To better support this functionality, the city went through a complete update of the AV and lighting systems that support the Council chambers.

Our approach was to provide an interactive process that empowered the users and operators to work together on the 'front end' and be intimately involved in the decision-making process. This resulted in upgrades that not only met the functional needs, but that were understood and agreed upon by the team.
