Upgrades to improve speech intelligibility and streaming.

Idibri provided design for audio and video upgrades to the City of Santee Council Chambers. The systems included the design and implementation of new video displays and video source equipment, sound reinforcement and recording systems, voting system and control system. The video systems allow the city council to stream and record the meetings for archival record and the audio systems make the bi-monthly council meetings easier for council members and residents to listen to the proceedings clearly and make the voting process more efficient.
