Addressing acoustic privacy and AV design for the largest public works project in the region.

The San Diego County Operations Center project was about modernization and consolidation—25 dispersed work groups were brought together on an integrated campus. It included over 70 conference rooms, operations centers, offices and public spaces of assembly addressing privacy issues for offices, conference and training rooms. The strategy was to create a common technical vocabulary in each of the meeting spaces so that users in one building could effortlessly use the systems in another. Larger meeting spaces have the infrastructure to become emergency operations centers when needed.

*Idibri's experience and ready understanding of the client's needs allowed our project to quickly and efficiently get an appropriate design in place that was suitable to our client, competitively bid and responsive to the end users. There were a few specialty spaces that were a challenge, and their attention to the details accommodated some late minor adjustments that made those spaces a success.*
